PLYMOUTH, Mich. – C&U Americas' corporate parent, The C&U Group, one of the world's top 10 bearing manufacturers and China's largest bearing maker, has achieved a notable milestone in bearing production by increasing its daily production rate to more than 2 million bearings per day. The company's overall bearing production now exceeds an annual rate of more than 625 million bearings. C&U Americas is The C&U Group's North American subsidiary, based in Plymouth, Mich.

C&U offers a full line of bearing types and styles, in sizes from 1.5mm inner diameter to 4000mm outer diameter, for use by a variety of industries in original equipment manufacturing as well as aftermarket and MRO operations. C&U makes more than 3,000 different kinds of bearings for a wide range of applications, such as wheel hubs, engines, gear-boxes, universal joints, alternators, water and hydraulic pumps, compressors, machine tools, mining equipment and power tools, as well as industrial transmissions and motors.

C&U says it relies on state-of-the-art manufacturing and stringent quality control in order to maintain its leadership position in the bearing market. C&U Bearings are precision crafted in advanced manufacturing facilities at seven major manufacturing centers that are independently certified for ISO9001 Quality Management System, QS9000/VDA6.1 Quality Management System, ISO14001 Environmental Management System and SO/TS 16949: 2002 Quality Management Systems.

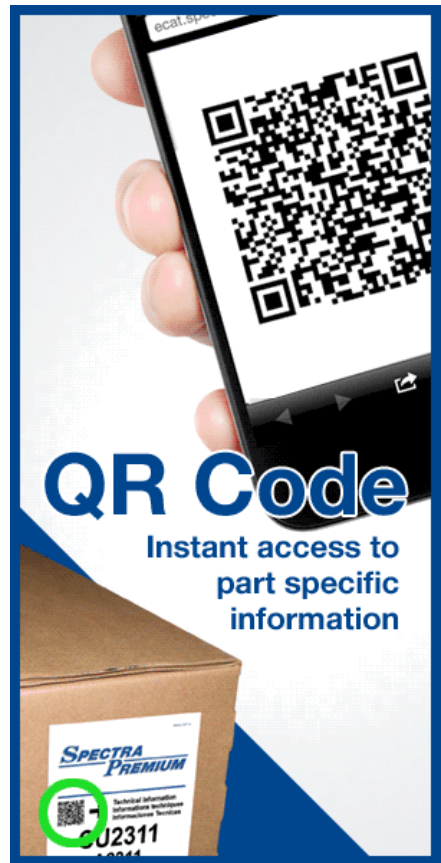

From its North American headquarters in Plymouth, Michigan, C&U Americas says it can offer its NAFTA customers exceptional value along with complete application engineering and customer service support.
